

How are kitchen doors made?

Kitchen doors are made from numerous materials and construction methods, as shown below. All doors are manufactured to a high level, so go with the door finish that is right for you, not just based on the price. Some doors cost less to produce due to their popularity.

Should I use melamine?

Yes, melamine doors maybe cheaper to produce but you can still get some very contemporary & modern designs from it, such as our Innova Cento range, which is ideal for modern apartments. Good quality melamine is just as durable, easy to clean & looks just as good as other finishes.
